TAMER ALI ASSAF

Technical Lead | Full-Stack, Database, GIS & LMS Solutions Engineer

Ramallah, Palestine | tassaf.developer@gmail.com | linkedin.com/in/tamer-ali-assaf-704548153 | github.com/tamer-Assaf2/About-Me

PROFESSIONAL PROFILE

Full-stack software and GIS professional with experience since 2021 in enterprise GIS, web applications, spatial databases, real-time operational platforms, APIs, dashboards and decision-support systems. Currently works within the Software Engineering & Solutions Department at Ramallah Digital Production, contributing to solution design, software development, database architecture, system integration, deployment planning and technical proposals. Hands-on experience designing learning-management functionality, course workflows, assessments, certificates, live-training operations, RBAC, audit trails and bilingual Arabic/English applications.

PROFESSIONAL EXPERIENCE

Software Engineering & Solutions Department

Ramallah Digital Production | Jan 2026 – Present

- Designs and develops web-based software solutions using Node.js, Express.js, PostgreSQL/PostGIS, MongoDB, REST APIs and modern web technologies.
- Translates business and operational requirements into technical modules, database models, workflows, dashboards and integration interfaces.
- Contributes to solution architecture, effort estimation, technical proposals/RFQs, deployment planning, testing coordination, documentation and handover.
- Develops bilingual Arabic/English platforms, role-based systems, GIS-enabled applications and operational dashboards.
- Supports API integration, database design, production-readiness planning and secure application-development practices.

GIS Manager / GIS Professional

Palestinian Police General Administration, Ramallah | Aug 2021 – Present

- Develops operational maps, GIS applications and command dashboards supporting planning, situational awareness and decision-support requirements.
- Performs GIS server/system administration, spatial data management, cartography, spatial analysis and GIS Python workflows.
- Integrates enterprise GIS, geospatial databases and web applications into operational workflows.

Geospatial Mapping Contributor

Palestinian Mapping Center | Aug 2022

- Collaborated in preparing, photographing and uploading Palestinian street data for Apple Maps using specialized mapping workflows.

EDUCATION

Security G.I.S — Al-Istiqlal University, Jericho | July 2021 | GPA 83.70% | Graduated first in the batch.

SELECTED SOFTWARE & APPLIED PROJECTS

Gemeco Academy — Integrated Learning & Training Platform | 2026 – Present

Lead development of a bilingual Arabic/English digital learning and training platform combining self-paced learning and instructor-led training. Architecture: Node.js, Express 5, PostgreSQL 17+, REST APIs, EJS and native mobile application architecture.

- Implemented course catalog and publishing workflows, enrollments, structured course content (sections, lessons and content blocks) and learning-progress tracking.
- Implemented quiz attempts, attempt limits and automated grading for supported question types, with secure handling of correct answers.
- Implemented live-training cohorts, trainer assignment/replacement, sessions, trainer schedule-conflict checks and student attendance workflows.
- Implemented certificate eligibility, unique issuance, revocation and public verification while preserving audit history.
- Implemented RBAC, authentication, OTP/refresh-token workflows, PostgreSQL-backed application services and audit logging for sensitive operations.
- Integrated Lahza payment workflows for enrollment activation and device registration for push notifications.
- Designed the platform for REST-based web/mobile integration and bilingual RTL/LTR operation.

Asfour Market — Digital Commerce & Operations Platform | 2026 – Present

Designing and developing a bilingual Arabic/English supermarket commerce and operations platform covering e-commerce, multi-branch inventory, orders, payments, invoicing, loyalty, reporting, role-based staff operations and a native Android application.

- Applied secure development practices including input validation, parameterized SQL, transactional handling, secret isolation and pre-penetration-test security review.
- Developed the Android application using Java/XML with customer and role-based employee workspaces, biometric login and QR scanning.
- Implemented standard and custom reporting with Excel/PDF export and scheduled email delivery.
- Implemented configurable roles and permissions, branch-scoped employee access and audit logging for sensitive administrative operations.
- Integrated HTD SMS/OTP, SMTP email services and FCM-based mobile notifications.
- Implemented order, payment and invoice workflows with Lahza payment integration, idempotent payment handling and PDF invoice generation.
- Implemented multi-branch inventory workflows, including stock reservation, release, final deduction and auditable stock movements.
- Built a Node.js/Express 5 and PostgreSQL 17+ modular-monolith backend with REST APIs and a SPA web application.

Rawabi Bus Tracking System — Rawabi English Academy

Designed and developed an integrated school transportation and trip-management platform covering buses, students, parents, supervisors, drivers, routes, stops and daily trips, with real-time vehicle tracking, interactive GIS maps, boarding/drop-off workflows, alerts, notifications, communication, operational dashboards and role-based mobile/web applications.

Large-Scale Election Operations GIS & Command Platform

Designed and developed an operational GIS platform integrating polling locations, sectors, resources, movement routes, assessments, field alerts, operational KPIs and command dashboards. Public descriptions exclude sensitive operational details.

Police Operational GIS & Geospatial Decision-Support Systems

Developed a portfolio of internal GIS applications for authorized operational planning, emergency and facility mapping, geospatial assessments, interactive operational orders and map-based monitoring and decision support.

Falcon GIS — Cash & Security Mission Management Platform

Developed a GIS-enabled operational platform for mission management, vehicles, resources, locations, routes and geospatial monitoring. Public descriptions intentionally exclude sensitive procedures.

TECHNICAL CAPABILITIES

Domain	Technologies / Capabilities
Full-Stack	Node.js, Express.js, EJS, React, REST APIs, responsive web applications, modular application design
Database	PostgreSQL, PostGIS, MongoDB, relational schema design, migrations, indexing, application data integration
LMS / Training	Course and lesson workflows, enrollments, quizzes, learning progress, certificates, cohorts, sessions, attendance, trainer assignment and training workflows
GIS & Spatial	ArcGIS, QGIS, PostGIS, Leaflet, OpenLayers, enterprise GIS, spatial analysis, cartography, GIS Python
Security & Access	Authentication, RBAC, OTP, session/token workflows, audit logging, role/permission models, secure application-development practices
Integration	REST APIs, third-party services, payment gateways, SMS/OTP services, real-time and operational integrations
Mobile	Android application development workflows; SwiftUI/iOS application architecture
Systems	Operational dashboards, real-time tracking, alerts, resource visualization, bilingual Arabic/English RTL/LTR applications
Reporting & Delivery	PDF/Excel reporting, scheduled reports, SMTP email, payment gateways, SMS/OTP, FCM notifications, backup/restore workflows

SELECTED TRAINING & CERTIFICATIONS

Esri Enterprise Workflow (2022) | ArcGIS Pro Workflow Essentials (2022) | ArcGIS Pro Basics (2023) | Remote Sensing using ArcGIS Pro (2023) | ArcGIS Online Basics (2023) | Basic of JavaScript Web Apps (2024) | GIS Basic (2024)

ADDITIONAL INFORMATION

Languages: Arabic — Native | English — Working proficiency
